

**Nutanix™ Enterprise
Cloud with HPE
ProLiant DX Appliances**

- Gain cloud-like agility and ease of use
- Scale out your Hewlett Packard Enterprise infrastructure as needs increase
- Consolidate silos into scalable HPE infrastructure with end-to-end lifecycle management
- Review real-time health of your HPE infrastructure to detect anomalies or plan for growth

Drive Your Business Forward With the Power of Choice

Get the Benefits of Public and Private Cloud With Nutanix and HPE

In today's digital economy, IT organizations face many challenges. Traditional IT infrastructure has created siloes of compute, storage, networking, and backup elements — each with its own toolset. Introducing virtualized environments adds even more complexity. However, unifying these disparate elements into a single integrated hybrid cloud solution can create a more agile data center to help IT scale with the business.

Having choice and flexibility in shaping your infrastructure architecture can help you optimize cost and workload management, as well as security and governance. Award-winning Nutanix software is now available on world-class HPE ProLiant Servers and HPE Apollo Servers, enabling you to lower total cost of ownership (TCO), simplify operations, and deliver secure data efficiency and scale.

Configurations are available in two ways: as an HPE ProLiant DX appliance, or as a pay-as-you-go consumption model through HPE GreenLake.

This offering brings the power of choice to customers of both Nutanix and HPE. HPE servers are fully tested and certified by Nutanix to run Nutanix Enterprise Cloud OS software. HPE customers can leverage Nutanix solutions to build an enterprise cloud delivering the simplicity and agility of public-cloud services, with the control and security needed in private-cloud environments. HPE ProLiant DX appliances have been extensively tested and certified jointly by Nutanix and HPE to run business-critical applications at scale. Deployments are fully supported by HPE for hardware, and Nutanix™ for the software, covering the entire IT from initial installation, infrastructure upgrades, scaling and troubleshooting.

Solution Benefits:

- Build a complete infrastructure stack with HPE servers and pre-installed Nutanix Enterprise Cloud OS software
- Radically simplify IT operations with one-click software upgrades, rapid scalability, and unparalleled performance — freeing your staff to focus on business applications rather than infrastructure management
- Achieve faster time-to-value: Nutanix Acropolis OS and AHV software is factory pre-installed on HPE DX appliances, enabling fast and simple infrastructure deployments

Use Cases for the HPE ProLiant DX Appliance and HPE GreenLake services:

- > **Enterprise Applications:** Deploy and scale your critical workloads, such as Microsoft® SQL, Oracle® and SAP® business applications.
- > **Virtual Desktop Infrastructure (VDI):** Make VDI successful by delivering excellent user performance and scalability without high operational and capital costs.
- > **Messaging, Collaboration, and Unified Communications (UC):** Proven deployments for Microsoft® Exchange, collaboration tools such as SharePoint®, and major UC vendors, including Avaya®, Cisco®, and Microsoft®.
- > **Big Data Analytics:** Applications scale as your needs grow, enabling a pay-as-you-grow model for scaling without overprovisioning compute or storage.

Using Nutanix Enterprise Cloud OS software on turnkey HPE servers makes data center infrastructure and clouds invisible – enabling IT to focus on business applications and services. The Nutanix/HPE solution delivers fast time to value, simple management, and maximum security to help your business run better.
