CLOUD-BASED SOLUTIONS

> **rubrik**

Rubrik orchestrates all critical data management functions – backup, recovery, search, archival, analytics, and more – for your cloud-native and hybrid cloud applications. Replicate your on-prem apps and data to AWS or quickly spin up apps for cost effective application recovery or test/dev. Automate cloud-native backups for Amazon EC2 and RDS instances via native integrations with AWS APIs, all through the same, simple interface.

> **veeAM**

Veeam® Platform, whether deployed on premises, in the cloud or through Backup as a Service (BaaS) or Disaster Recovery as a Service (DRaaS).

The solution is designed to accelerate business agility by providing a single platform for cloud, virtual, SaaS, Kubernetes, and physical data management and protection that extends beyond core backup and recovery.

> **COMMVAULT®**

Commvault has native integration that lets you seamlessly move and manage data and workloads across on-premises and AWS environments. Boost efficiency and cut costs by eliminating tape storage. Automate your data backup and archive processes to leverage Amazon Simple Storage Service (S3).

With data protection, workload conversion and migration, and comprehensive eDiscovery/compliance capabilities, Commvault is the choice for managing your AWS cloud data.

> **COHESITY**

Cohesity provides a single platform and UI for data management and gives you the choice of a managed consumption model with DMaaS or a self-managed option with software. It runs natively on AWS to protect cloud-native apps and when it is deployed on-premises it provides simple connectivity to the AWS to extend your data center to the cloud for long-term retention, disaster recovery, test/dev, and tiering as well providing protection for AWS Outposts.

❯ **Zerto**

Combining the Zerto IT Resilience Platform™ with AWS helps you achieve IT resilience, by converging disaster recovery, data protection and cloud mobility. Fast and flexible workload migration between AWS regions helps you accelerate cloud adoption.

❯ NASUNI

Nasuni UniFS®: The Only Global File System Built for the Cloud. The first global file system that lives in cloud object storage.

Free of device constraints. Nasuni's patented UniFS technology unlocks the infinite capacity, durability, and geo-redundancy of the "new disk."

❯ VARONIS

Varonis gives you centralized security management for your data and core infrastructure in the cloud, on-premises, or in a hybrid environment.

Get a complete picture of who's accessing and sharing files & emails, classify and protect sensitive data, and stop advanced threats with a unified data security platform.

❯ splunk>

The Data-to-Everything Platform includes everything you need to ensure your digital initiatives succeed.

Search, analyze, and visualize the data gathered from websites, applications, sensors, devices etc. which make up your IT infrastructure and business in the cloud or on prem.

❯ WEKA

WekaIO is a multi-protocol ready file system, that offers the simplicity of NAS, the performance of SAN (or DAS), and the scale of Object Storage – all under 1x file system at a fraction of the cost.

Looking for data center space to house your cloud operations and applications?

Experis Data Centers, powered by RecoveryPoint, offers a full range of competitively priced cloud services, including: multi-tenant, public, private and hybrid cloud deployments, disaster recovery and backup, object storage and archiving. Experis Data Centers, powered by RecoveryPoint , provides all these solutions and more for your private cloud at either your chosen location or our Tier 3 Datacenters.
